

"Little Sarasota Bay"

An aerial shot of the bay and its surrounding communities

Evan Brown Photography

56% of homes in Rivendell use more water than the average county home, and many use more than *twice* the average.

Lead the way for water conservation. Aim to reduce your use by 30 gallons per day.

**Help save the drops, save money,
and protect the bay!**

Hi, neighbor!

Your neighborhood has been identified as one that could make a big difference for conservation while protecting the quality of our bay.

The Rivendell community is in the top 25% of water users in Sarasota County. Overwatering your lawn and landscape can lead to nutrient leaching, which can adversely impact our bays.

At UF/IFAS Extension Sarasota County, we're here to help you become a water conservation leader. To learn more about saving water at home:
